

Crystal Unit

■ NX2016SF Data Sheet (for Mobile Communications)

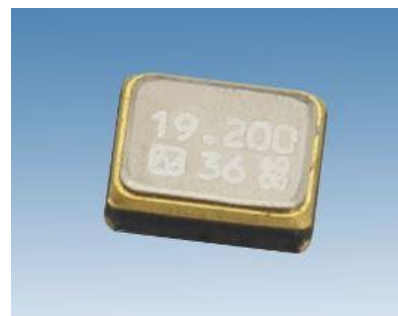

Application

Communications equipment

Features

Crystal unit with built-in Thermistor

- Integrated with a crystal unit to eliminate space in circuit design
(Conventionally, a crystal unit and a temperature sensor are mounted on the same board.)
- A crystal element and a temperature sensor (thermistor) are mounted in the same airtight chamber, and the temperature closer to the crystal element can be detected, thereby improving the frequency temperature compensation compared with the conventional crystal unit.
- Ultra-compact and low profile (Typ. : 2.0×1.6×0.45 mm)
- Surface-mount crystal unit
(Available for reflow soldering)
- Reflow temperature profile
(Available for lead free soldering)

RoHS Compliant
Directive 2011/65/EU
Directive (EU) 2015/863

Pb free

Notes on use

1. Even if the appearance color etc. of the product differs by purchasing the component parts by more than two companies, there is no influence on the characteristics and reliability.
2. Since the crystal unit is a passive component, it is important to have appropriate circuit conditions. Please be sure to check the circuit conditions before using the crystal units, and ensure the necessary circuit margin, and confirm that the desired frequency is output. Moreover, please check the circuit conditions when using an existing crystal unit for another model or board. If the circuit conditions are not appropriate, there is a risk of oscillation stop or frequency deviation.
